

OpenDX mesh visualization intro

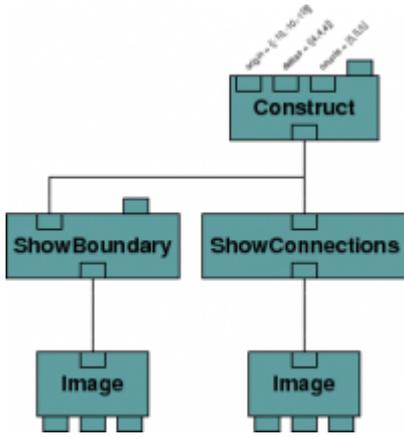

Step 1: Grid construction and edges visualization

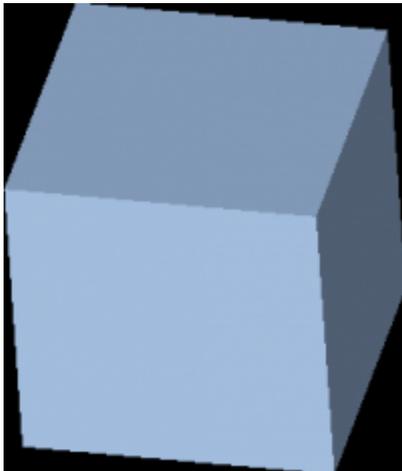

```
grid = Construct(origin=[-10, -10, -10],  
                deltas=[4, 4, 4], counts=[5, 5, 5]);  
edges = ShowConnections(grid);  
camera = AutoCamera(edges, "off-diagonal");  
Display(edges, camera);  
KeyIn("Hit any key to exit");
```

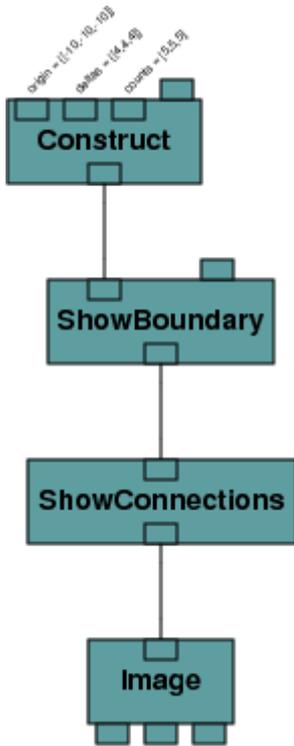

Step 2: Showing grid boundary

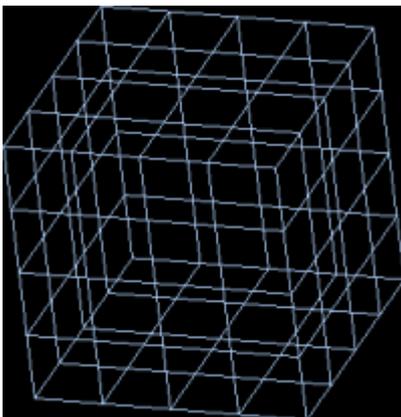

```
grid = Construct(origin=[-10,-10,-10],  
                deltas=[4,4,4], counts=[5,5,5]);  
edges = ShowConnections(grid);  
boundary = ShowBoundary(grid);  
camera = AutoCamera(edges, "off-diagonal");  
Display(edges, camera);  
KeyIn("Hit any key to exit");  
Display(boundary, camera);  
KeyIn("Hit any key to exit");
```

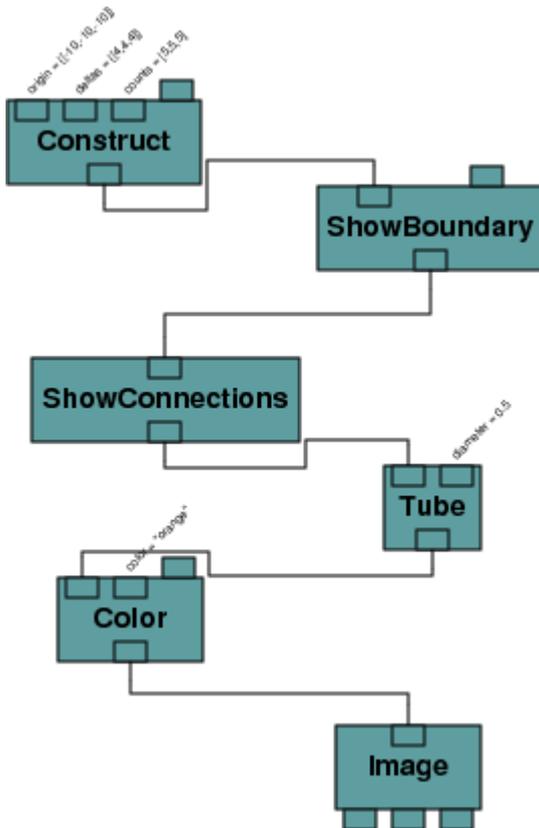

Step 3: Showing edges on boundary only

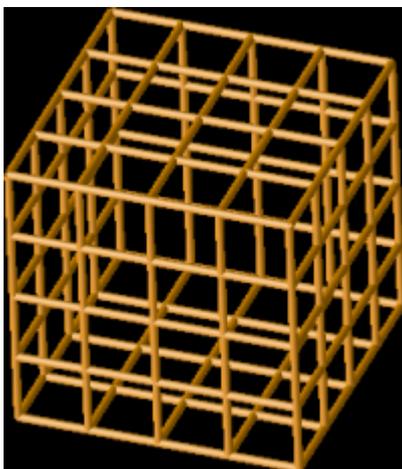

```
grid = Construct(origin=[-10,-10,-10],  
                deltas=[4,4,4], counts=[5,5,5]);  
boundary = ShowBoundary(grid);  
edges = ShowConnections(boundary);  
camera = AutoCamera(edges, "off-diagonal");  
Display(edges, camera);  
KeyIn("Hit any key to exit");
```

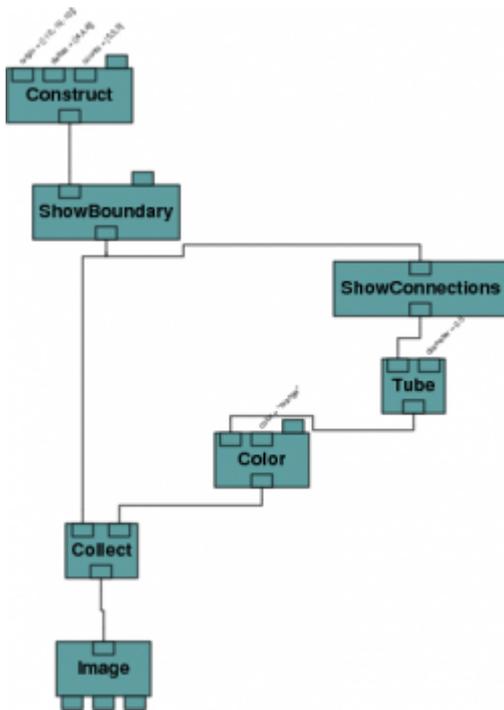

Step 4: Showing eds as tubes

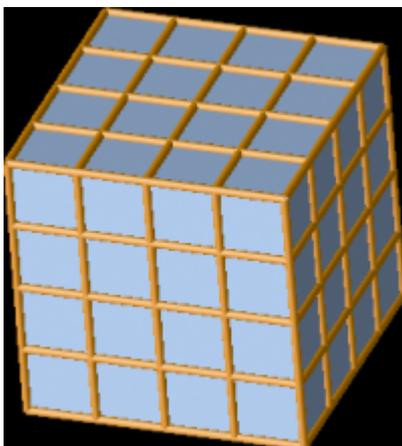

```
grid = Construct(origin=[-10,-10,-10],  
                deltas=[4,4,4], counts=[5,5,5]);  
boundary = ShowBoundary(grid);  
edges = ShowConnections(boundary);  
edges = Tube(edges, diameter=0.5);  
edges = Color(edges, "orange");  
camera = AutoCamera(edges, "off-diagonal");  
Display(edges, camera);  
KeyIn("Hit any key to exit");
```

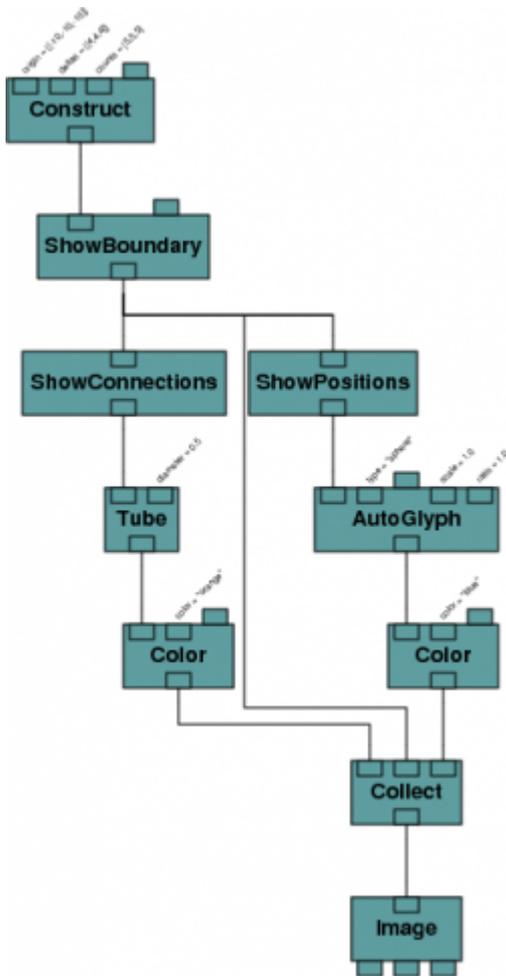

Step 5: Superimposing boundary and edges

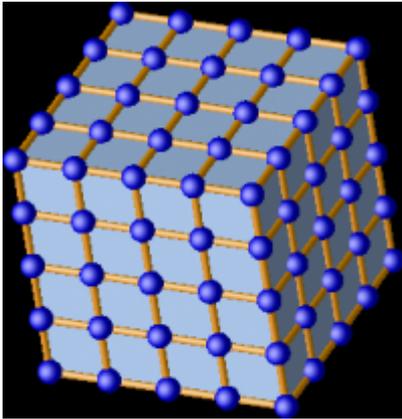

```
grid = Construct(origin=[-10,-10,-10],
                deltas=[4,4,4], counts=[5,5,5]);
boundary = ShowBoundary(grid);
edges = ShowConnections(boundary);
edges = Tube(edges, diameter=0.5);
edges = Color(edges, "orange");
be = Collect(boundary, edges);
camera = AutoCamera(edges, "off-diagonal");
Display(be, camera);
KeyIn("Hit any key to exit");
```

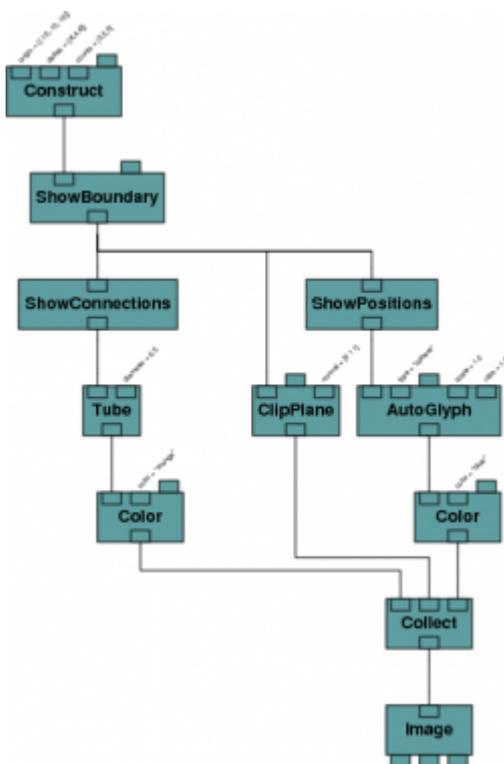

Step 6: Showing node glyphs

```
grid = Construct(origin=[-10,-10,-10],
                 deltas=[4,4,4], counts=[5,5,5]);
boundary = ShowBoundary(grid);
edges = ShowConnections(boundary);
edges = Tube(edges, diameter=0.5);
edges = Color(edges, "orange");
points = ShowPositions(boundary);
points = AutoGlyph(points, type="sphere",
                   scale=1.0, ratio=1.0);
points = Color(points, "blue");
be = Collect(boundary, edges, points);
camera = AutoCamera(points, "off-diagonal");
Display(be, camera);
KeyIn("Hit any key to exit");
```

Step 7: Using cutting plane

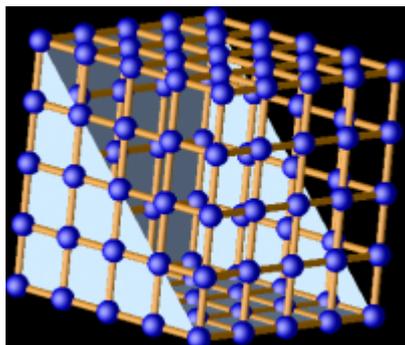

```

grid = Construct(origin=[-10,-10,-10],
                 deltas=[4,4,4], counts=[5,5,5]);
boundary = ShowBoundary(grid);
edges = ShowConnections(boundary);
edges = Tube(edges, diameter=0.5);
edges = Color(edges, "orange");
points = ShowPositions(boundary);
points = AutoGlyph(points, type="sphere",
                   scale=1.0, ratio=1.0);
points = Color(points, "blue");
boundary = ClipPlane(boundary, normal=[0,1,1]);
be = Collect(boundary, edges, points);
camera = AutoCamera(points, "off-diagonal");
Display(be, camera);

```

```
KeyIn("Hit any key to exit");
```
